

# Soy-Start™

The Ultimate Soybean Disease Treatment Package

Brought to you by **TERNING SEEDS**

**Soy-Start™** is a combination of **ApronMaxx®** and **Thiram DF75 Fungicide**.

ApronMAXX® fungicide seed treatment, applied by grower, dealer, or seed company, controls these threats and provides maximum protection for your crop investment, which, in turn, can increase your chances of higher yields.

#### Changes in production practices

- Earlier planting to maximize yields, avoid dry conditions and spread workload
- Reduced tillage to conserve soil and save trips over the field
- Increased use of higher value seed

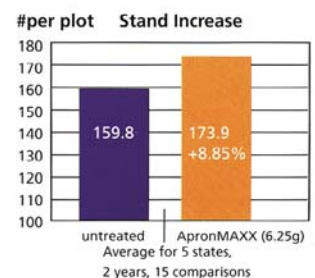

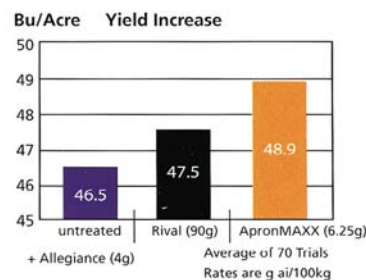

#### Resulting challenges

- Cooler, wetter seedbeds promote disease development
- Crop residue from reduced tillage harbors many disease pathogens
- Maximizing return per acre from seed investment

ApronMAXX protects seed through both contact and systemic activity and is effective against

- *Pythium*
- *Phytophthora*
- *Rhizoctonia*
- *Fusarium*
- *Phomopsis*
- *Aspergillus*
- *Penicillium*
- seed-borne *Sclerotinia*
- general seed rots

ApronMAXX inhibits fungal growth, prevents spore production and also penetrates the soybean seed coat to protect the developing seedling.

The other added advantage of **Soy-Start™** that brings you the extra punch is the **Thiram DF75**. **Thiram DF75** gives you **extra protection** against:

- Pithium
- Seedling Blight
- Seedling Decay

This affordable and powerful combo gives you the one-two punch to get your soybeans off to a fast start.

*ApronMAXX®Pak is a product of Syngenta.*

**DANGER: Do not use for food, feed, or oil purposes. Do not reuse empty sacks.**
